

# proxSafe®

Where is the digital camera? Who has been using the company car? When was the technician in the building? proxSafe is the intelligent management system for keys and valuables which provides answers to your daily 'key questions'. Contactless RFID keytag technology provides reassuring reliability. The proxSafe family is modular, expandable and network ready.

## Accessory-kit

The proxSafe accessory - kit is the heart of the electronic key management system. It consists of three parts:

The **electronic keyTag** is designed for secure and robust placing and locking of the keys in the proxCylinder. There is a transponder chip securely casted inside the key tag. Once placed into the electro-magnetic field of a reader it transmits its unique identification without any electrical contacts and the need of own energy.

The **keyRing** secures the keys and other items on the key tag. It is available in various sizes and suitable for single keys as well as large bundles. The standard size is 25 mm in diameter.

The **one-time seal** provides a secure connection between ring and tag. It consists of two parts, which can be easily mounted without a tool. Once mounted, the seal has to be broken before the key bundle can be dismantled. For enhanced security, the one-time seal is available with an engraved unique identification number.

Depending on size of the panel, each accessory-kit contains 8 or 16 black keyTags, keyrings and one box with 50 grey one time seals.

## Your benefits at a glance:

- **Contactless:** No corrosion, no wear
- **Reliable Identification** even after years of use
- **Waterproof** for unlimited applications
- **Robust** and suitable for heavy key bundles
- **Uniquely Numbered Seals** secure the integrity of the key bundles (option)
- **Simple and Fast Mounted** without tools
- **Light Weight**
