## TESTIMONIAL

Telekurs (Singapore) Pte Ltd invested into a few units of Deister Electronic proxEntry® PRX10 access control readers and cards in 1994 to automate its door access. The reader uses contact-less technology allowing excellent access control security and fast door accessibility with just a mere flash of card. We are also very pleased by its innovative reader design which can be aesthetically mounted/concealed to complement with our office décor while still providing excellent reading range.

The whole system has worked reliably since it was installed and we have not encountered any noticeable overheads to our system. We are impressed that up to date, the system is working excellently with continuous 24 / 7 smooth and efficient access control operation, translating to reduced total cost of ownership to us.

Deister's access control product has indeed surpassed our expectation with its high level of durability and performance. Needless to say, the product developed by Deister Electronic which is highly regarded for its high performance technology and high quality products, has delivered its promise. Additionally, Coselec has provided us with a high level of support and has always been responsive to our business needs.

We are indeed very happy and fortunate to have invested into Deister Electronic proxEntry® PRX10 access control system and will not hesitate to recommend the product to any other interested parties.

Yours faithfully  
TELEKURS (SINGAPORE) PTE LTD
