

Do you have to cope with sloppy, indecipherable and tiresome service reports? Are You wasting your valuable time with tedious inspections and facing increasing operation costs? And are you just tired of ongoing quarrels with service/cleaning or maintenance subcontractors, who render poor services?

Spare a few minutes of your time, because we have the solution for you!

Who are we...

Coselec Pte Ltd is hundred percent incorporated in Singapore. We represent Deister Electronic GmbH, a leading European manufacturer, specialised in the low frequency RF/ID technology, and are responsible for the distribution in the Asian region. Deister finished products and components are developed and designed for applications in the security industry, such as Electronic Guard Patrol Monitoring and Proximity Access Control, or the industrial automation.

What is our objective...

It is our objective to offer companies complete solutions for the implementation of cost effective monitoring systems for the evaluation and monitoring of maintenance or service work performed.

How does our system work...

Deister's monitoring system consist of data carriers, hand held data collectors (scanners), interface and evaluation software. Wherever a specific information is required about type or extend of service, maintenance work performed or about maintenance schedules, equipment assets including location, usage and parts a pre-programmed data carrier (RF) is applied. This data is then collected and memorised by scanning the data carrier with a hand held scanner. After completing the collection of data, the same is downloaded via a interface and can instantly be viewed on the computer.

And what are your benefits...

Saving of time & operation costs ✓

Eliminating of unnecessary paperwork ✓

Fast and easy access to critical information ✓

Instant clear reports ✓

Easy tracking of assets ✓

Prevention of costly breakdown of machinery or interruptions ✓
