To Whom It May Concern

TESTIMONIAL

In February 2007, Johor Port Authority Malaysia purchased an electronic key management system called proxSafe maxx and has it installed at the administration department. proxSafe maxx system was chosen because of its field-proven RFID and contactless technology and the system is absolutely maintenance-free.

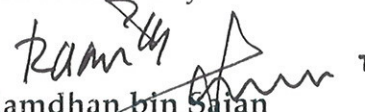

The proxSafe maxx RFID electronic key management system from deister electronic GmbH provides Johor Port full control and accountability for all its many critical keys round the clock. The user-friendly system also provides us with full audit trail and real-time monitoring on the movement of each and every key by time, date and user. The system enables us to programme and control the access to the keys by allowing certain users to take the keys. An alarm or email alerts can also be set for overdue keys. We have saved on our administrative and manpower costs as we no longer need to deploy a staff to be responsible for the administration of the keys. Our staff are also more accountable to their keys now.

We are also pleased with the design of the proxSafe maxx system which comes with an aesthetic designed roller-shutter. This saves so much of the workspace. The system also comes with innovative accessories like key-tag and key-seals. The contactless key-tag comes an embedded RFID chip and is made of very durable and rugged materials. We no longer have to worry about wear and tear due to corrosion, vandalism or shock. In addition, the key-tag comes with a 10-year warranty.

The proxSafe maxx RFID electronic key management system has been installed for more than 2 years and it has really surpassed our expectations with its high performance in managing our keys.

We are indeed very pleased to have invested into this deister electronic proxSafe maxx RFID electronic key management system. We will not hesitate to recommend this system to any other interested parties.

Yours faithfully

Ramdhan bin Saian
Deputy Port Authority Police
Johor Port Authority
